CORRECTION FACTORS FOR TARGET OF

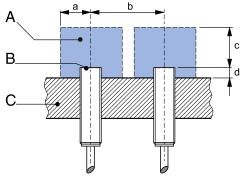

Steel FE 360 1 Copper 1 Aluminum 1.2 Brass 1.4 Stainless Steel V2A 1/2 mm 0.2 / 0.7

CORRECTION FACTORS FOR EMBEDDABLE MOUNTING IN SUPPORT OF

Steel FE 360 0.8 Aluminum 0.85 Brass 0.65 Stainless Steel V2A 0.8

Note: the operating distance of the sensor must be multiplied by the correction factor of the material. For example, the operating distance on Aluminum is $S_{n,Al} = S_n \times CF_{Al}$. In case of embeddable mounting, the distance is multiplied by the additional correction factor of the support, thus $S_{n,Al} = S_n \times CF_{Al} \times CF_{emb,Al}$.
